DETAILED ACTION

Applicants' arguments, filed 7 June 2005, have been fully considered. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

Claims 1-6, 8-51, 61-65, and 71-96 are currently pending.

This application is in condition for allowance except for the following formal matters listed below.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Specification

The disclosure is objected to because of the following informalities: The specification contains reference to color drawings at page 17, line 29 and page 18, line 1. However there are no color drawings in the instant application. Claim 25 also references "color" as it pertains to objects on a graph.

An amendment to whether the drawings and/or the specification may be made to overcome this objection. Applicant is reminded that any amendment must be supported by the originally filed specification.

Appropriate correction is required.

Art Unit: 1631

Reason's for Allowance

The following is a statement of reasons for the indication of allowable subject matter:

The prior art does not teach or fairly suggest a computer-implemented method for quantifying relative gene relatedness using a multivariate nonlinear model in which the effectiveness of the model in predicting gene expression is measured. The claims are enabled, as effectiveness is measured by comparing the models to one another and ranking gene relatedness.
